

Simulation Report — MintRun

Sim ID	sim-892ce59087dc
Brand	MintRun
Category	FinTech
Generated	2026-05-10T05:12:18.073167+00:00
Pairs	600
Duration (sec)	15.0
Verdict	positive_effect

Significant positive effect detected in 7 metric(s)

1. Primary Metrics

Strong positive effect: all 7 primary metrics show statistically significant lift, led by ad recall (+9.1pp) and message association (+4.3pp).

Upper funnel (awareness): ad recall +9.1pp, brand awareness +1.0pp. Mid funnel (attitudes): message association +4.3pp, favorability +3.7pp. Lower funnel (action): search intent +3.7pp, purchase intent +1.3pp, consideration +1.3pp.

Headroom Lift highlights where the ad captured the most unrealised baseline potential: ad recall reached +9.7pp of its remaining headroom, while brand awareness captured only +1.2pp.

Sample size: n = 600 pairs. The 95% confidence intervals reflect frequentist coverage probability across repeated simulations under identical model and persona conditions; they do not represent the probability that any single interval contains the true consumer lift. External validity (generalisation to real-world consumer behaviour) requires separate validation.

Metric	Funnel	Treatment	Control	Abs. Lift	Rel. Lift	Headroom Lift	95% CI	p	Sig.
brand_awareness_lift	Upper	19.50%	18.49%	+1.02%	+5.5%	+1.25%	[+0.75%, +1.28%]	0.0000	***
ad_recall_lift	Upper	15.54%	6.42%	+9.08%	+141.4%	+9.74%	[+8.34%, +9.82%]	0.0000	***
message_association_lift	Mid	10.62%	6.29%	+4.33%	+68.8%	+4.62%	[+3.78%, +4.88%]	0.0000	***
favorability_lift	Mid	14.53%	10.79%	+3.74%	+34.7%	+4.19%	[+3.05%, +4.43%]	0.0000	***
purchase_intent_lift	Lower	8.23%	6.91%	+1.32%	+19.1%	+1.42%	[+0.98%, +1.66%]	0.0000	***
search_intent_lift	Lower	8.79%	5.10%	+3.70%	+72.6%	+3.90%	[+3.14%, +4.26%]	0.0000	***
consideration_lift	Lower	18.57%	17.24%	+1.32%	+7.7%	+1.61%	[+1.01%, +1.63%]	0.0000	***

Significance: *** p<0.001 ** p<0.01 * p<0.05

2. Video Analysis Results

Total duration (sec)	15.00
Number of shots	1
Brand first appearance (sec)	0.00
Brand exposures	2
Logo duration / ratio	2.00 sec / 13.3%
Product duration / ratio	3.00 sec / 20.0%

Price signals	4
CTA events	1
Dominant tone	neutral
Has narration / dialogue	False / False

Visual Detection per Shot (1 shots)

Shot 0 [0.0s–8.0s]

Logo ✓ Product ✓ CTA ✓

Emotion: —

Scene: product_closeup, text_overlay

3. Survival Curve

Percentage of viewers still watching the ad at each second. Sharp drops indicate moments where viewers disengaged; a flat curve means retention held through the playthrough.

4. Improvements

1. opening_improvement — Present the product benefit concisely at the opening

Rationale: First 5s: 17% stopped watching ad (17% skipped, 0% left session). Product exposure: Yes

Expected: Slight improvement in brand awareness and initial attention

Retest: Re-simulate under the same conditions to verify opening_hook improvement

2. brand_exposure_improvement — Extend logo display duration and fix it in a prominent position

Rationale: Logo appeared 2 time(s), total 2.0s, first at 0.0s

Expected: Improved brand salience baseline

Retest: Re-simulate under the same conditions to verify logo_exposure improvement

3. price_appeal_improvement — Add price appeal (discount rate, limited-time offer)

Rationale: 4 price signal(s) detected

Expected: Improved response from price-sensitive segments

Retest: Re-simulate under the same conditions to verify price_appeal improvement

4. cta_improvement — Enhance CTA visuals and clarify action guidance

Rationale: 1 CTA event(s) (0 in latter half)

Expected: Slight improvement in click lift

Retest: Re-simulate under the same conditions to verify cta_effectiveness improvement

5. segment_specific_improvement — Consider segment-specific creative variations

Rationale: Max effect: brand_aware_business_industrial (0.014), Min: ad_averse_business_industrial (0.001)

Expected: Improved target relevance

Retest: Re-simulate under the same conditions to verify segment_difference improvement

5. Agent Impressions

Overall sentiment: positive

The ad for MintRun received a generally positive reception, particularly among brand-aware and finance-oriented audiences who appreciated its clear messaging on auto-budgeting and significant savings. However, ad-averse viewers and those who found the ad visually repetitive or text unclear often skipped early. There is a strong correlation between existing brand familiarity or financial relevance and sustained positive engagement with the advertisement.

*This section shows aggregated summaries. The full per-agent data (one row per agent) is in **agents.csv**.*

By Segment

ad_averse_business_industrial

Viewers in this segment, characterized by high ad aversion, overwhelmingly skipped the ad within seconds, barely registering the MintRun brand or budgeting message. Nothing in the initial moments was compelling enough to override their desire to return to their primary content.

ad_averse_finance

This group largely exhibited low ad tolerance, leading most to skip the ad quickly, even if the financial topic was somewhat relevant. Some noted issues with messy text, boring visuals, or a lack of new information after the initial seconds, contributing to disengagement, with only one viewer finding it short and relevant enough to watch fully.

brand_aware_business_industrial

This segment, already familiar with MintRun, reacted overwhelmingly positively. They recognized the brand and appreciated the clear showcase of auto-budgeting and the \$1,200 savings claim, which reinforced their positive impression. Many watched the full ad, considering further engagement or click-through, despite minor visual issues like messy text or a weak ending.

brand_aware_finance

Every viewer in this segment responded positively, recognizing MintRun and valuing the reinforcement of its auto-budgeting and savings features, especially the \$1,200 claim. They watched the entire ad, felt engaged, and many considered revisiting the brand's offerings, although some mentioned messy text and an abrupt, blank screen ending.

brand_unaware_business_industrial

Reactions in this segment were mixed to positive. While some found the auto-budgeting and savings claims relevant and compelling enough to watch the full ad and consider exploring MintRun, many others remained neutral, perceiving it as a generic finance app that became repetitive or lacked a strong hook, leading to early skips.

brand_unaware_finance

This segment showed a strong positive response, with many viewers finding the ad immediately engaging due to its clear presentation of auto-budgeting and significant savings, aligning with their financial interests. While many watched the entire ad and considered further exploration, some neutral responses indicated that the ad didn't always offer enough unique content to maintain interest beyond the initial message.

Improvement Insights from Viewer Feedback

- Strengthen the initial hook within the first 2-3 seconds to effectively capture attention and provide a more compelling reason for ad-averse viewers to continue watching, potentially with more dynamic visuals or an instant value proposition.
- Enhance the clarity and visual consistency of all on-screen text and maintain engaging visuals throughout the ad's full duration to prevent disengagement and ensure clear communication of the message.
- Introduce more varied content or progressive information delivery to sustain viewer interest, especially for brand-unaware and less ad-tolerant audiences who currently find the ad repetitive after its initial message.

Appendix: Statistical Details (for analysts)

Effect-size diagnostics for each primary metric. The main report uses Absolute Lift, Relative Lift, and 95% CI as the decision indicators because they are the industry-standard measures (Nielsen / Google / Meta / Kantar / IAB). The figures below are provided for analyst follow-up only; they are not intended for marketer-facing reporting.

Metric	Funnel	Cohen's h	Cohen's d_z	ρ (T,C)
brand_awareness_lift	Upper	0.0259	0.451	0.990
ad_recall_lift	Upper	0.2980	1.605	0.841
message_association_lift	Mid	0.1569	1.060	0.936
favorability_lift	Mid	0.1128	0.775	0.377
purchase_intent_lift	Lower	0.0500	0.573	0.989
search_intent_lift	Lower	0.1467	0.869	0.466
consideration_lift	Lower	0.0347	0.572	0.991

Definitions.

Cohen's h: $2 \cdot \arcsin(\sqrt{p_T}) - 2 \cdot \arcsin(\sqrt{p_C})$. Effect-size measure for two proportions with a variance-stabilising arcsine transform. Conventional thresholds: 0.20 small, 0.50 medium, 0.80 large. Treats low- and high-baseline metrics on the same scale, but is not directly translatable into Incremental Intenders.

Cohen's d_z: $\text{mean}(D)/\text{SD}(D)$, where $D_i = T_i - C_i$. The paired variant of Cohen's d, defined for within-subject (paired) designs. Same thresholds as d (0.20 / 0.50 / 0.80).

ρ (T, C): Pearson correlation between paired Treatment and Control scores. A diagnostic for the d_z denominator. $\rho \rightarrow 1$ collapses $\text{SD}(D)$ toward zero and inflates d_z; this reflects the simulator's shared-baseline architecture and is not a defect, but it does mean d_z values across metrics with very different ρ are not directly comparable.
